**Algae Alerts in the Barwon-Darling river system  
as of Wednesday Wednesday, 7 September 2005**

	<b>CURRENT ALERT LEVEL</b>	<b>PREDOMINANT BLUE- GREEN ALGAE GENERA<sup>#</sup></b>	<b>PREVIOUS ALERT LEVEL</b>
<b>LOCATION</b>	11 July 2005		
Barwon River @ Mungindi	<b>NIL</b>	<b>No blue-green algae detected</b>	
<b>LOCATION</b>	22 Aug 2005		
Barwon River @ Collarenebri	<b>NIL</b>	<b>No blue-green algae detected</b>	
<b>LOCATION</b>	30 Aug 2005		
Barwon River @ Walgett Dangar Bridge	<b>NIL</b>	<b>Raphidiopsis 205 Cells/ml (non tox.)</b>	
Namoi River @ Walgett	<b>NIL</b>	<b>No blue-green algae detected</b>	<b>LOW</b>
<b>LOCATION</b>			
Barwon River @ Brewarrina	No current information		
<b>LOCATION</b>			
Darling River @ Bourke	No current information		
<b>LOCATION</b>			
Darling River @ 'Rose Isle' 30km north east of Louth NSW	No current information		
Darling River @ Louth	No current information		
<b>LOCATION</b>			
Darling River @ Tilpa	No current information		
Darling River @ 'Trevallyn' 70km south west of Tilpa NSW	No current information		
Darling River @ 'Atley' 10km east of Wilcannia NSW	No current information		
<b>Darling River @ Wilcannia</b>	<b>NIL</b>	<b>No blue-green algae detected</b>	
Darling River @ 'Culpaulin' 25km south west of Wilcannia NSW	No current information		

# Only the two most frequently observed blue-green algae genera that contribute to the current alert level are presented above in order of their abundance. *There may also have been other blue-green algae genera present.* These data are presented for information only. We recommend that water treatment and stock management responses should not be altered according to the observed blue-green algae genera. All blue-green algae genera should be considered as potentially harmful to human and animal health when present in blooms.

# Far West Algal Alert Report

## Wednesday, 7 September 2005

### COMMENTS

Blue green algae activity remains very quiet throughout the Barwon/Darling

River users and landholders are advised to avoid waters in areas subject to high and very high alert levels or with visible areas of algae scums. They should also consider either alternative sources of water or treatment of river water supply to remove algae and algae by-product. NSW Health advises that any domestic use of surface water without treatment should be avoided.

### ALERT DEFINITIONS

#### **High Alert (>15,000 cells/ml), Very high alert (>50,000 cells/ml)**

These alert levels represent 'bloom' conditions. The water will appear green and may have strong, musty or organically polluted odours. The blue-green algae will be visible as clumps or as scums. Blue-green algae 'blooms' may be toxic to humans and animals. Toxicity should be assumed. People should avoid reaches where blue-green algae can be seen or which have a strong odour as previously described. Contact with or consumption of untreated water from the river should be avoided because of the risk of eye and skin irritations and stomach upsets. Boiling is not a suitable way of treating water containing blue-green algae and in fact may release more toxins. Filtration in conjunction with activated carbon is a more effective means of water treatment. Dogs and stock are particularly at risk from toxic blue-green algae blooms. Owners should keep dogs away from high alert areas and provide alternative watering points for stock.

#### **Medium Alert (2,000-15,000 cells/ml)**

Blue-green algae may be multiplying in numbers. The water may have a green tinge and musty or organic taste and odours. Alternative supplies of raw water for domestic purposes should be considered. Domestic water suppliers should institute taste and odour removal systems where available. The water may be suitable for recreational use, however people should be cautious as algal concentrations can increase rapidly.

#### **Low Alert (<2,000 cells/ml)**

Blue-green algae occur naturally at low numbers. At this concentration, algae do not pose a threat for recreational, stock or domestic use.

This blue-green algal alert report is based on routine monitoring by the Department of Infrastructure, Planning and Natural Resources and local Shire Councils. It should be noted that the presence and location of blue-green algae in the Barwon-Darling river system could vary considerably, according to water and weather conditions.
